The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).						
Status

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Sargeant et al. Sargeant discloses a dishwasher comprising a wash chamber, a pump for circulating wash fluid, and a spray bar with at least one downwardly directed jet (column 5 lines 8-18). In Fig. 36, Sargeant shows the downwardly directed jets 150 discharging water onto a perforated horizontal filter plate 104 (see Fig. 27). The perforations are in a circular pattern and do not uniformly cover the entire plate.
- 3. In regards to claims 3 and 4, filter plate 104 possesses no open area in its central portion, which is an area below the pattern generated by the downwardly directed jets. This filter plate also has a portion adjacent to the two semi-circular sides of the central portion with a larger percentage of open area than that of the central portion. These side zones have a plurality of holes with a greater frequency, corresponding to a lower pitch, than that of the central zone.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Application/Control Number: 10/699,945 Page 3

Art Unit: 1746

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claims 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sargeant et al. Although Sargeant does not disclose dimensions of the filter plate perforations, it is well settled that determinations of optimum values of cause effective variables, such as perforation dimension and percentage open area, is within the skill of one practicing in the art since dimension and percentage open area would effect the size and amount of particle filtration. Therefore it would have been obvious to optimize such parameters in Sargeant with expectation of achieving the desired filtration unless there is a showing of unexpected results. *In re Boesch*, 205 USPQ 215 (CCPA 1980).

Allowable Subject Matter

6. Claim 7 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

- 7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- U.S. Patent No. 5779812 to Thies et al. Theis discloses a filter screen for a dishwasher with both a fine mesh portion and a coarse mesh portion.
- U.S. Patent No. 4347861 to Clearman et al. Clearman discloses a filter plate for a dishwasher with a percentage of open area that is not uniform.
